Proposal background

“Passion for life” is a spread concept that makes people aware of what they can do in their daily life to live healthy longer. It is about breaking common patterns, be aware of improvements, proceed from theory into action and make changes in your own life. The program consist of six areas; **empowerment, safety at home, nutrition, active living, social life, medications.**

Our idea is to bring this proven and spread concept to a new area were we bring the most out of ICT to assist in the goal. By co-designing and developing a platform, integrating technologies and tools we would like to support all six areas.

We are a consortium from Sweden consisting of:

*Jönköping county council – the original passion for life
developer*

*Swedish pensioners organisations, PRO and SPK, running
the passion for life seminars*

*Linnaeus University – researching on co-design ICT for health
situations*

*We are looking for companies that can take this proven
concept further, technical expertise, end-user and public
organisations that can be co-designers, researchers profiles
that complement our team.*
