MARKET TRENDS

A new industry era and transformation

The digitalization looks like
the industrialization

- Digitalization – traditional industries
- Data – great amount, owned & shared
- Things – connected and intelligent
- Communications – faster and more
- Users – active and enhanced
- Functions – More and seamless

Application characteristics

Type	Response times	Data amount	Traffic amount	Cache	DC location
Cold storage	seconds	Gigabytes	Mb/s		remote
Off-line big data crunching	seconds	Gigabytes	Gb/s		remote
Chat/IoT type communication	100 th milliseconds	kilobytes	kb/s		remote
Web/app rendering	100 th milliseconds	Megabytes	Mb/s	Yes	remote
Streaming	10 th milliseconds	Gigabytes	Mb/s	Yes	mix
Real-time conferencing	10 th milliseconds	Megabytes	Mb/s	Yes	mix
Real-time analytics	milliseconds	Megabytes	Gb/s		proximity
Transaction based/Control loops	milliseconds	kilobytes	kb/s		proximity

Mega datacenter complexity

PROJECT IDEA

SENDATE – EXTEND

SEcure Networking for a DATa center cloud in Europe –
EXTENDED Datacenter solutions

Improve efficiency and flexibility of
deployment, monitoring, operations, maintenance and
management of storage, compute, communication and
energy supply infrastructure
within datacenters and in a distributed cloud.

SENDATE – EXTEND

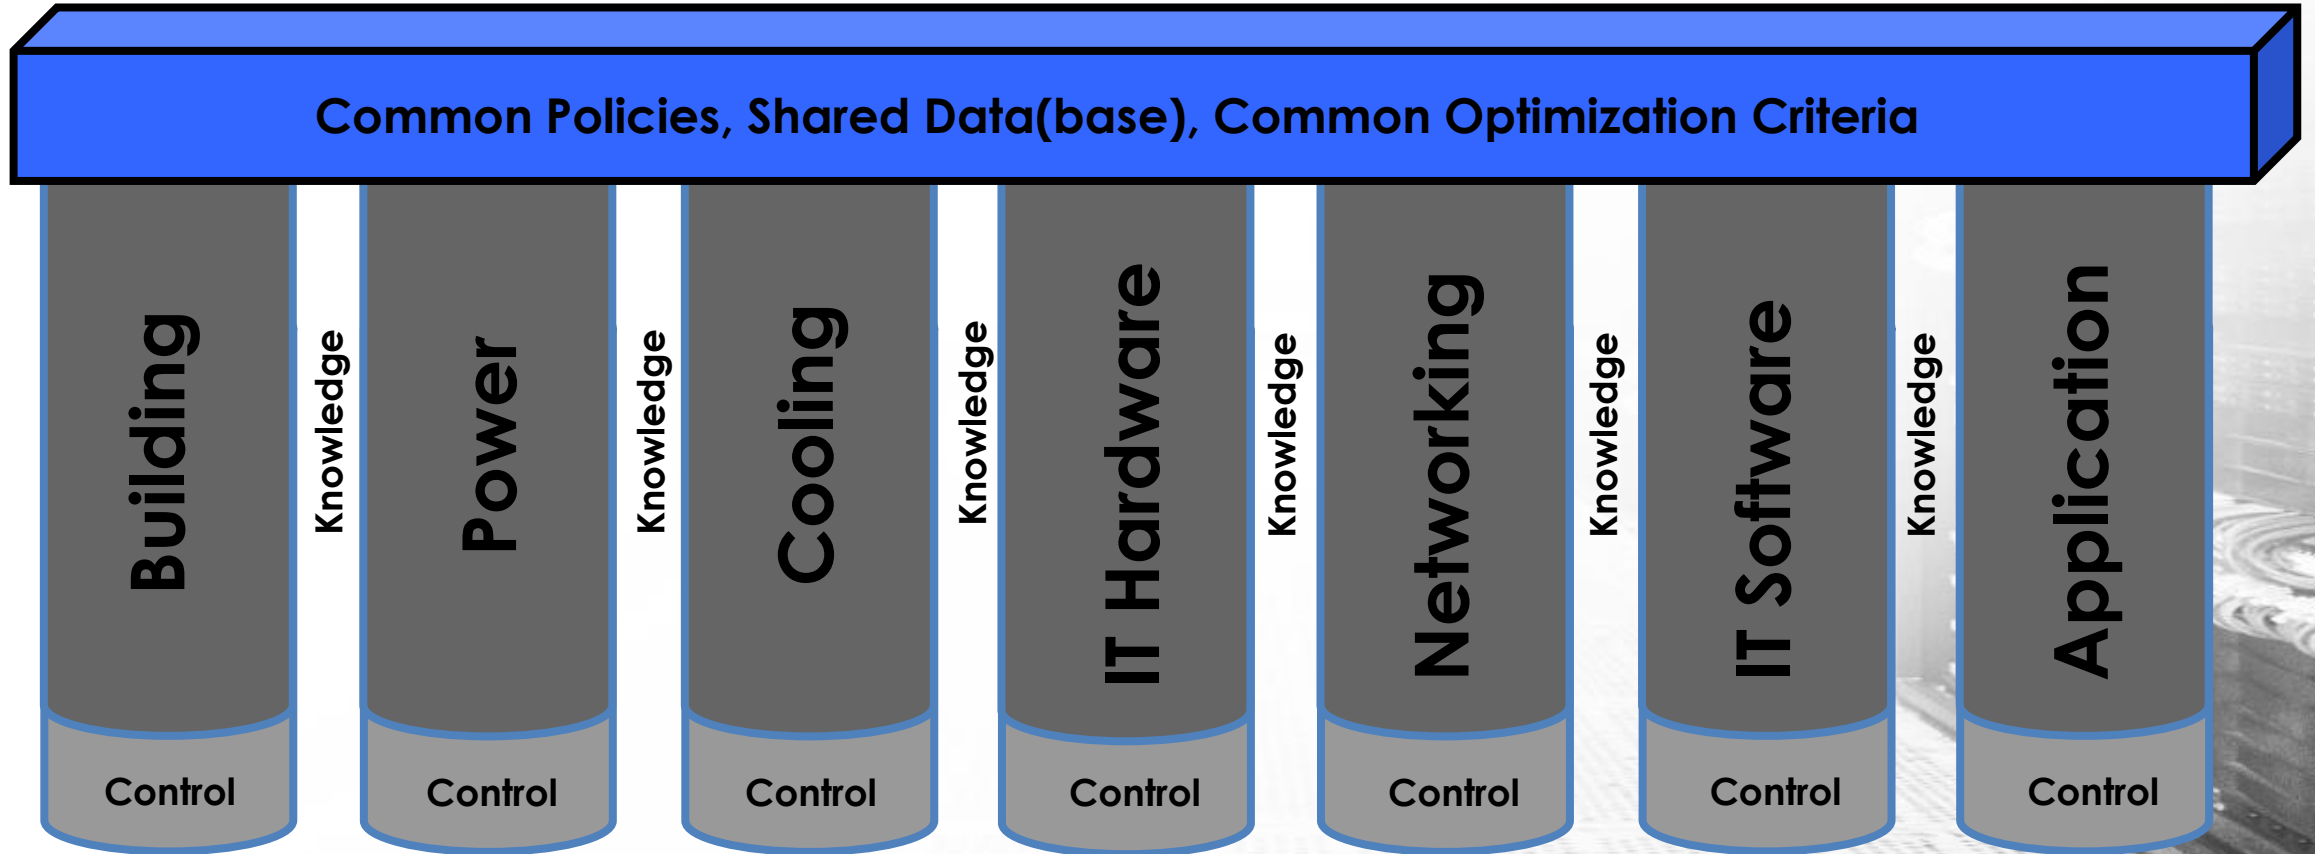

SEcure Networking for a DATa center cloud in Europe –
EXTENDED Datacenter solutions

Improve efficiency and flexibility of
operating all different parts
within datacenters and in a distributed cloud.

EXTEND – Holistic Datacenter Automation

EXTEND – Holistic Datacenter Automation

SICS ICE – A PROJECT RESOURCE

SICS-ICE Room-in-room module 1

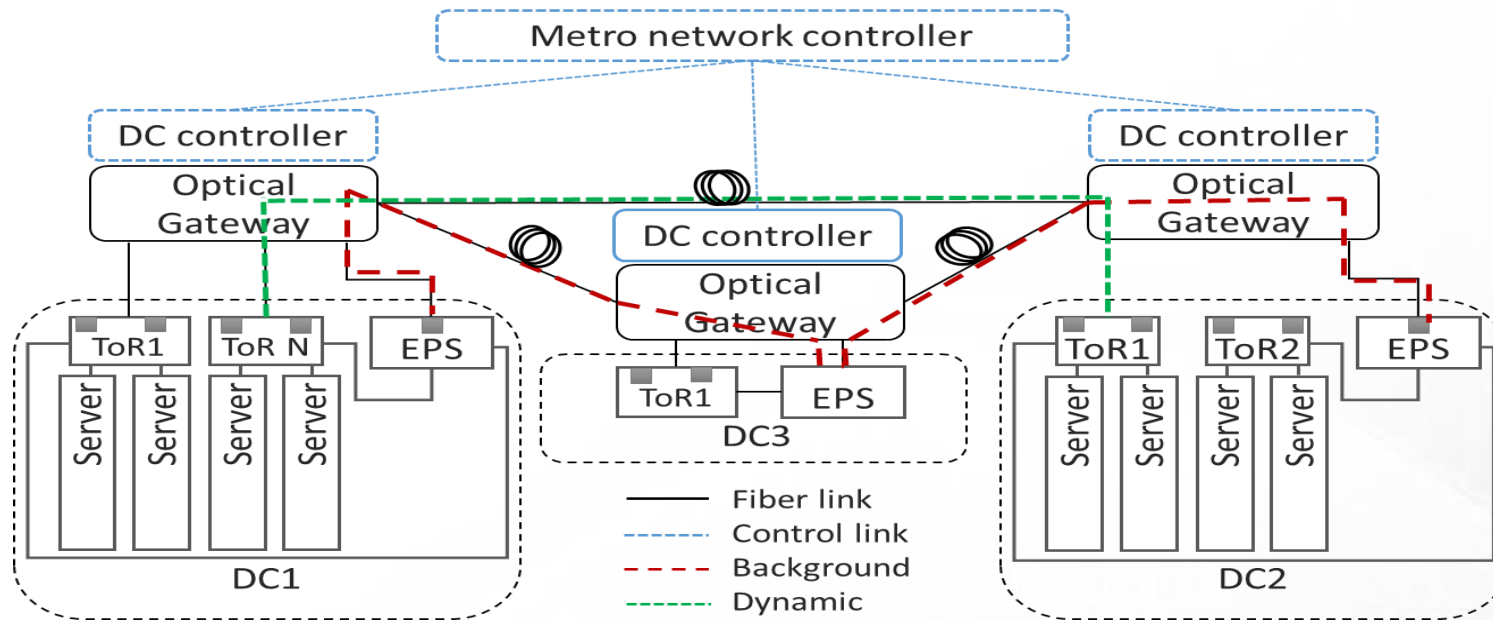

In operation since January 2016. 500 GB of metrics data now

A FEW USE-CASES

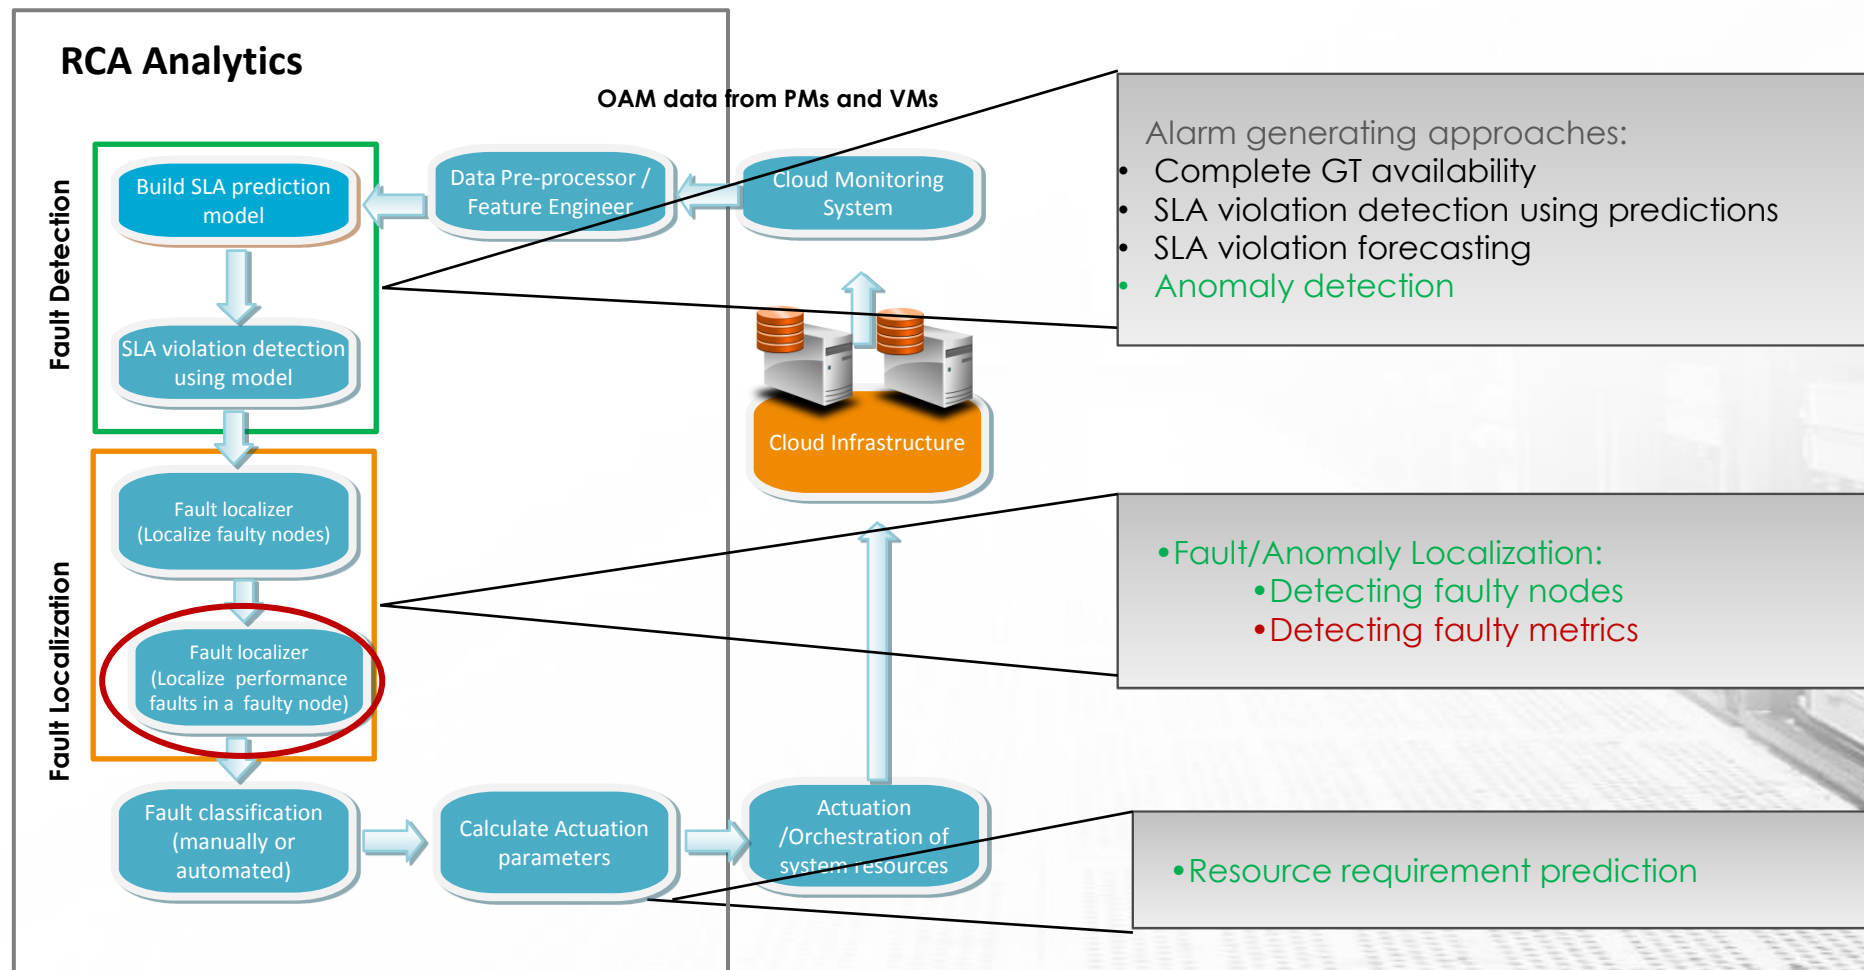

Converged architecture for geographically distributed metro DCs

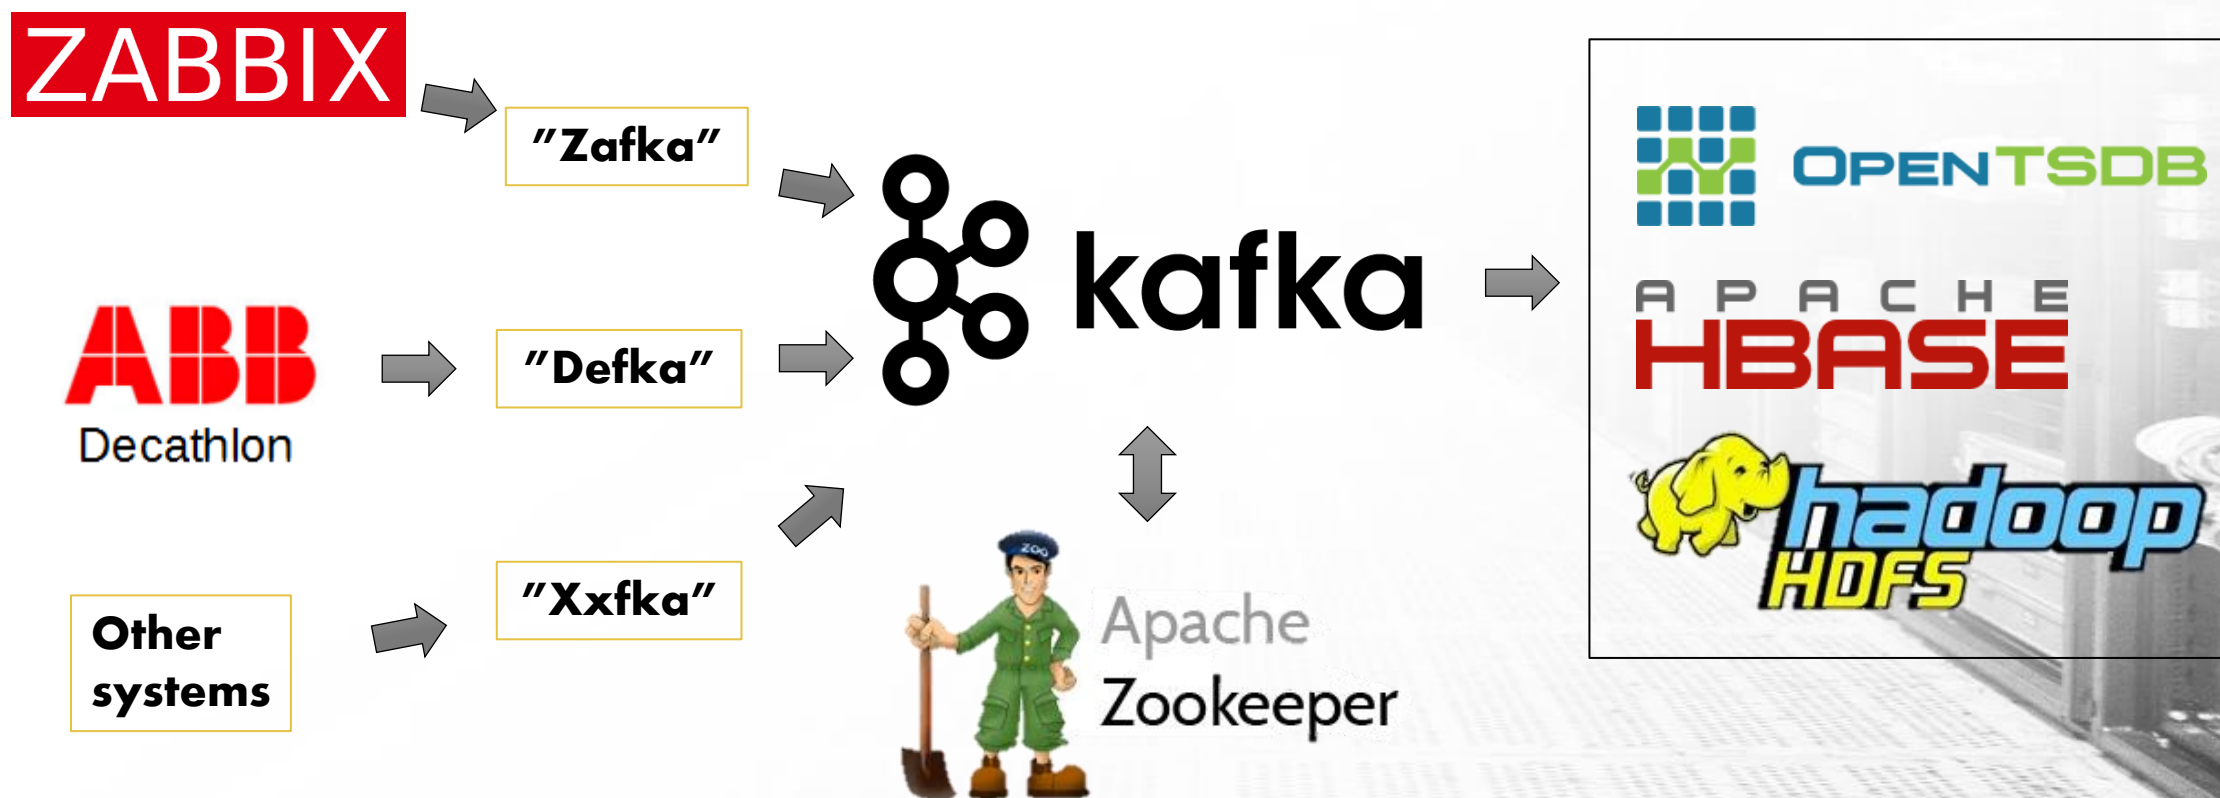

The architecture enables to dynamically establish lightpath between racks in different DCs

- Impact of various abstraction policies (for the intra- and inter-DC resources) on the provisioning of ToR to ToR connectivity
- Protection and restoration strategies of provisioned cloud services based on the concept of VM migration

Root Cause Analytics based on metric correlation

Metrics "backbone"

Maintenance application

Data collection

Metrics database

Failure detection

Asset management

Light-weight application

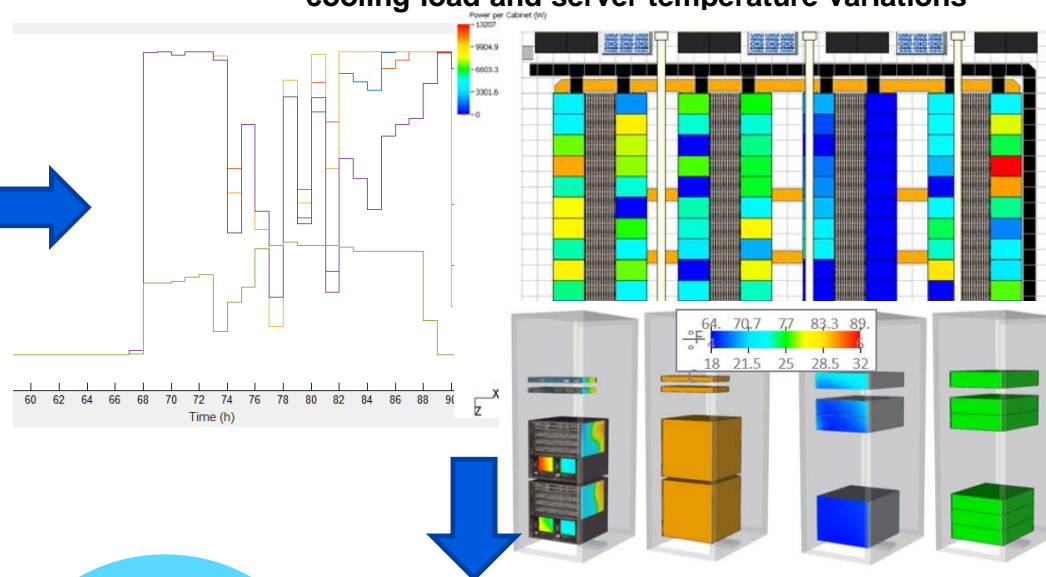

Asset positioning

IT load vs Cooling

IT load scheduling analysis over a period to find IT load pattern

IT load analysis over 48 hours to present IT load, cooling load and server temperature variations

Simulate a number of cooling strategies

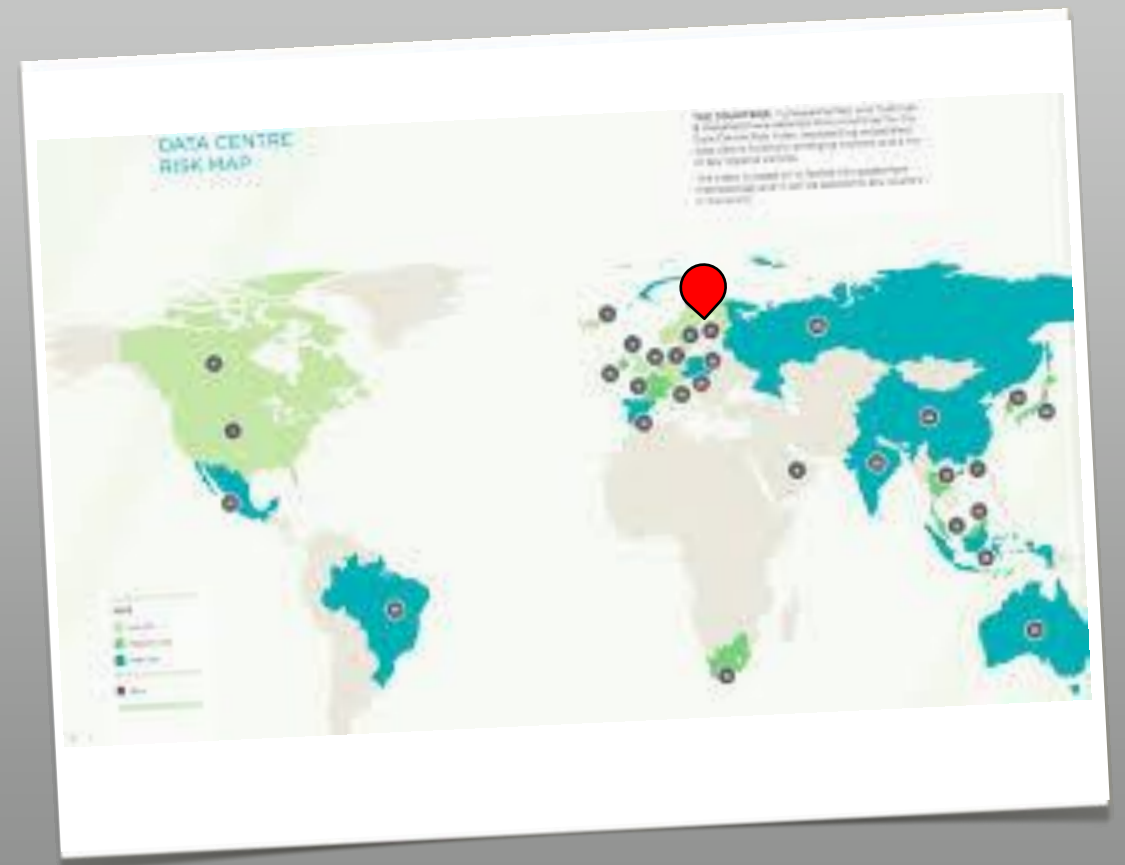

- Dynamic cooling, flow, T
- IT load shifting
- Distributed air flow
- Shutter flow control

A tool to provide relations among CRAHs and individual racks and a degree of influence

Dynamic cooling control in zone-level or rack-level
