Smart Connected World

Celtic-Plus Proposers Day
20th June 2017, Helsinki

Pitch of the Project Proposal Real Time Ray Tracing for 5G

*Markku Juntti, CWC, University of Oulu
markku.juntti@oulu.fi*

CWC
oulu.fi/cwc

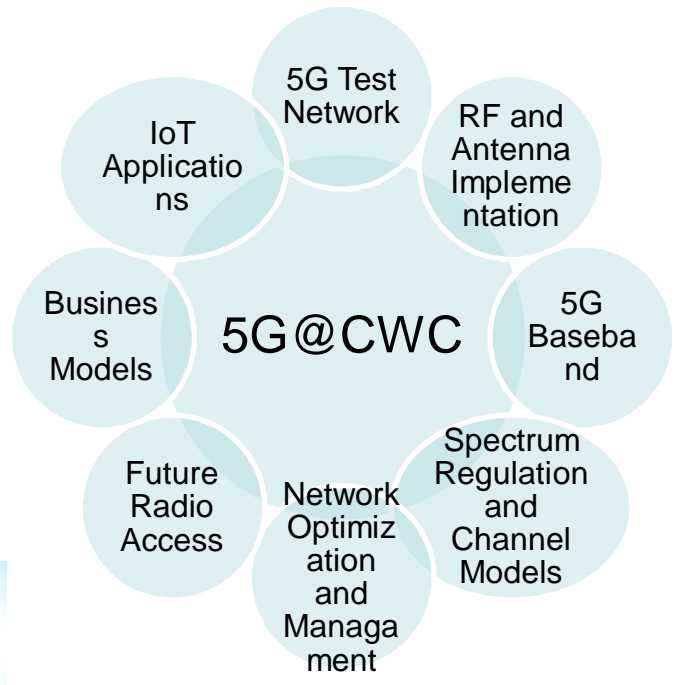

Teaser

- Enable 5G connectivity, service and vertical application targets
- High capacity links at mm-waves and above require better real-time channel models
- Ray-tracing boosted by accelerated computation is a potential enabler
- Requires collecting information of the environment and data analytics
- Major innovation and business potential

Organisation Profile

Proposal Introduction (1)

- Target: enabling wireless connectivity by real-time ray tracing based channel learning
- Use cases: 4G, 5G, 6G etc.
- Technical aspects:
 - Efficient computation and acceleration
 - (Bayesian machine) learning and data fusion
 - Electromagnetic modeling of environments

Proposal Introduction (2)

Technological (R)evolution towards 5G systems

Optimized manually

Project

Optimized through modelling

Hand-made, slow turn around

From months to minutes

Fast, easy to use and better predicted performance service

Tentative Finnish Partners

Further discussions on-going
