

EURO MD2 project proposal

Celtic-Plus event

Basel, Nov. 18, 2014

Swiss Mobility Solutions
a Gemalto company

EURECOM
Sophia Antipolis

TELLEMENT MONACO

Why Customer Experience Analytics to provide enhanced steering solution ?

✓ High Throughput

✓ Low % of dropped calls

✓ Good 3G & 4G coverage

Network view

! I've got good coverage
● but I cannot connect. I will share this feedback with my operator through their great App!

! After my OS version upgrade, my device is much slower and consumes more battery

! I cannot make voice calls from a specific location

! My favourite video streaming app is slow when I use public WiFi

! There's an App Draining my data plan and I hardly use it

40% of dissatisfied Customers are likely to switch service provider

Customer reality

Project proposal

✦ **Transparent Multi Device Data roaming across Europe**

“Improve User experience for IP based services while roaming within EUROPE.

New roaming solutions to perform Device-based LTE roaming steering according to the device parameters and the Measurement of customers perceived experience (QoE)”.

Project partners

- ✦ **GEMALTO (France):**
Mobile handsets database
- ✦ **SMS (Spain):**
QoE solution / server, mobile apps
- ✦ **MCTEL (Monaco)**
Roaming steering platform
- ✦ **EURECOM Insitute (France) :**
Roaming users profiling apps & LTE validation
- ✦ **MONACO TELECOM (Monaco) :**
LTE Validation infrastructure & use cases
- ✦ **Associated partner : Com4innov (France)**
Experimental testbed - LTE & Roaming

Swiss Mobility Solutions
a Gemalto company

TELLEMENT MONACO

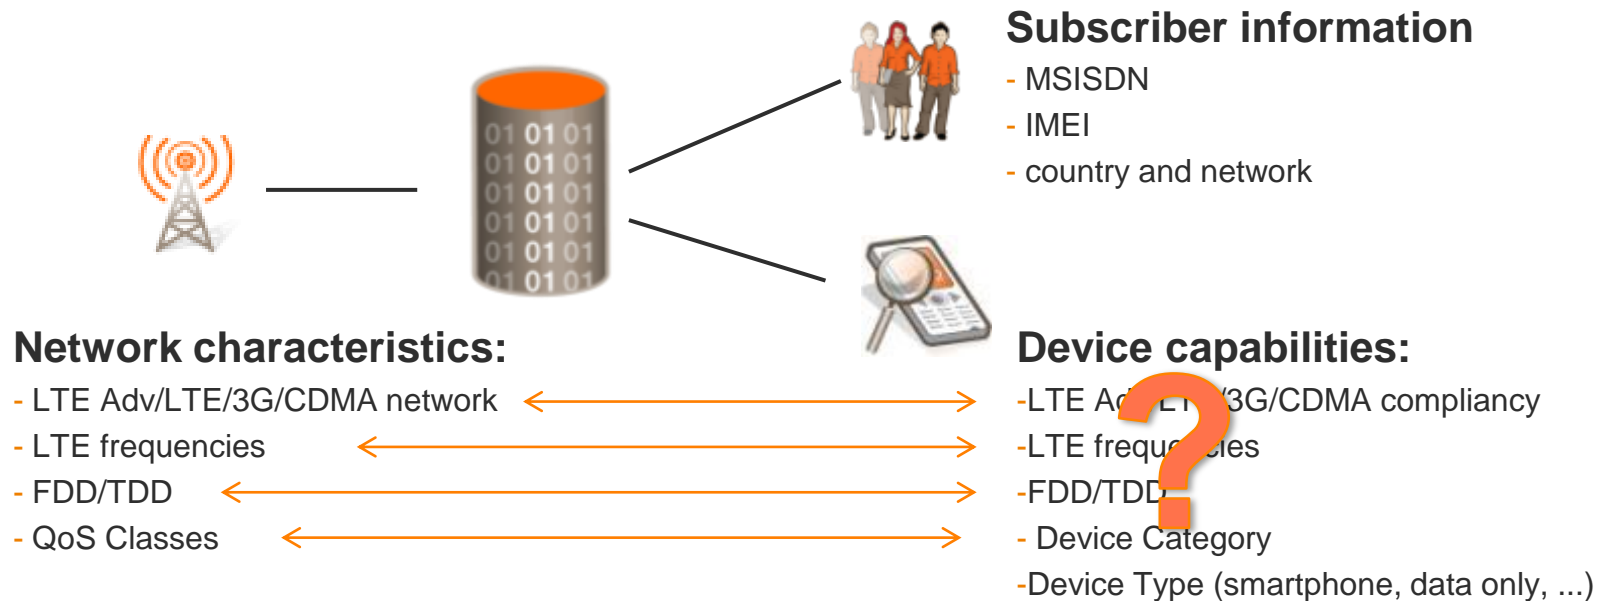

Improve User experience for IP based services while roaming within EUROPE

Propositions	Activities / Partnership
<p data-bbox="46 358 1093 425">Perform Device based LTE roaming steering according to the device parameters:</p> <ul data-bbox="142 472 517 839" style="list-style-type: none">• Device Type (Brand, Model)• Radio Frequencies supported• TDD vs FDD access method• Native VoLTE support• SRVCC support• Native RCS support• Refresh support• Device/network categories• LTE Advanced support• LTE broadcast support• Etc...	<p data-bbox="1180 596 1715 664">Collection, Test & Validation of device characteristics is required</p>
<p data-bbox="46 939 1054 1006">Perform LTE Roaming Steering according to the QoE of outbound roamers and steer accordingly:</p> <ul data-bbox="142 1043 1128 1225" style="list-style-type: none">• Steering rules take into account the Network view, Device dimension and QoE perceived by Customer• Measure MNO services performance (Measure Quality Of Experience as seen by roamers) for network coverage and Data Services• Customer Network Analytics: set of reports and views to help the Operator to quickly understand QoE of different services	<p data-bbox="1180 1029 1818 1096">SW integration of Roaming Steering platform and Customer Network Analytics platform</p> <p data-bbox="1180 1143 1696 1210">In situ validation with LTE validation infrastructure</p>

Device based steering for LTE

- ✧ Is it possible to steer correctly a subscriber in a LTE world without knowing their device capabilities?

Device knowledge is required to avoid LTE blind steering

Device based steering use cases for LTE

Partner	Device	Steering policy
		Signaling rejected the first time or accepted but with OTA request to push him to LTE partner
		Accepted to boost the LTE usage
		Depends on the operator objectives
		Depends on the operator objectives but not priority

Device based LTE steering for a “like at home” experience

Enjoy powerful customers segmentation

- ✦ Apply different steering rules for each **roaming profile** and for each **device type** and **QoE experience collected**
 - Steer prepaid subs on CAMEL partners
 - Steer heavy data users on LTE networks
 - Steer accordingly to the M2M use case and needs

Customer segmentation
device based steering
and QoE experience
are key to deliver the best Quality of Experience

=> Target is to reconcile Network and Users views

Euro MD2 project proposal overview

- ✦ Advanced concept of stirring solution using device database and QoE analytics
- ✦ Targeting CELTIC Plus, Feb. 2015, « spring call »
 - ✦ **“While connected” Celtic Plus area** i.e. once communication is established, including requirements for end-to-end services and applications.
 - ✦ Duration: 24 months
- ✦ Search for additional partners:
 - ✦ With strong mobile expertise: device data base or mobile services or solution developer to assess the stirring quality
 - ✦ Complementary techno bricks improving the technical approach
 - ✦ French or Spanish or MC, SMEs/ETI to ease funding process and relevancy
